To Whom it May Concern,

I have enjoyed two years' formal education building, troubleshooting, and interfacing systems of analog and digital electronics. I also have several years' experience writing and typesetting publication-quality technical documents in LaTeX. I gained this experience while writing my homework solutions, my lab reports, and my thesis with LaTeX.

For my thesis, I used Matlab for image analysis and python for data-visualization. The image analysis objectively measures each user-selected cell's size and shape throughout a movie. My thesis visualized the size data and shape data for these cells as the cells detached from a substrate.

My drive to innovate and optimize as well as my enthusiasm for working with technology make me valuable to any employer. I hope for a position in or close to research. If there are doubts about my qualifications, personality, or enthusiasm then please interview me so that I may lay these doubts to rest.

Signed,
Kyle Thomas
